

# Neurology & Psychiatry Network of the Year

NeuroTransData GmbH

Neuburg, Germany

**DESTINY is the ingenious system for patient care that the healthcare field has been waiting for.**

NeuroTransData (NTD) is a Germany-based network of over 180 physicians specialising in neurology and psychiatry. The network's partners are recruited from modern, powerful and fully digitalised practises, treating around 600,000 patients across Germany every year. The network aims to facilitate high-quality, individualised patient treatments using modern technology and treatment methods.

The NTD physicians have developed a complete patient management system called DESTINY, which provides database-assisted therapy decision support. DESTINY not only greatly enhances treatment success, it also reduces overall healthcare costs. It allows the medical field to enable continuous therapy control and optimisation by providing modules to support doctors in the assessment of medical data, as well as a bidirectional data exchange, electronic patient file and an app to improve doctor-patient interaction.

Having been developed by doctors for doctors, DESTINY has a high usability and practicability, allowing it to be easily integrated into day-to-day patient care. With the collective knowledge and expertise of the system's developers, its medical content is of the highest quality and accuracy. Since its inception in 2012, the network has developed additional modules to ensure it is consistently up-to-date and optimised with medical policies and treatments.

Within Germany's current healthcare system, most patient management systems are limited to single areas of use. DESTINY, however, takes the complete patient journey into account, making it a unique end-to-end solution that cannot be found elsewhere. NTD are also able to gather reliable, long-term data on neurology and psychiatry patients across Germany, allowing them to analyse and develop understanding and treatments of related diseases to a higher degree than ever before.

The reputation for excellence NTD has gained in neurology, psychiatry and the digital healthcare solutions market has greatly impressed the judges. The network has culminated its expertise to create a much-needed patient management system that allows for a more fruitful doctor-patient relationship. Judge Andrew Walsh added: "DESTINY is the ingenious system for patient care that the healthcare field has been waiting for."

Centers of excellence
